*Stefan P. J. Dullens, Ronald P. Mensink, Marjolijn C. E. Bragt, Arie K. Kies, and Jogchum Plat*

**COVER:** Effect of the overexpression of lipoprotein lipase on the distribution of type IIa and IIb fibers visualized by immunohistochemistry in gastrocnemius and quadriceps muscle of Tg and littermate controls (nTg) male mice. The increased proportion of type IIa fibers (stained green) was visibly apparent in gastrocnemius and quadriceps muscles from Tg mice. Type IIb fibers (stained red) were noticeably decreased in both muscles of Tg mice compared with the muscles of nTg mice. (See Jensen et al., p. 870.)
